

SENIOR LARAVEL ENGINEER JOB DESCRIPTION

Who we are

Yabble is a disruptive agile SaaS company changing the way data is created, analyzed, and used in the world of market research. We build world-leading, proprietary AI-powered insights tools that are at the cutting edge of the industry.

Founded by Kathryn Topp and Rachel O'Shea, Yabble is an emerging global business with a team of 29 talented, innovative, and driven team members spread across six countries. The business is growing at pace and is now looking for our next brilliant team member. You'd be joining one of the most dynamic parts of the business — exploring, building, and maintaining proprietary products that delight customers and add enterprise value to the organization.

Your new job

Innovation is at the core of the Yabble business; you'll be working on cutting-edge technology and brand-new products and assisting in the creation and implementation of new AI tech.

Specific things you'll be doing:

- Building the Yabble platform in Laravel on AWS ECS
- Designing and working with our primary SQL database
- Working closely with our React team to support their requirements with our internal API
- Working closely with our Machine Learning team to build our data processing and pipeline management system
- Extending our Laravel API for internal and external use with documentation and authentication support
- Supporting and extending our internal integrations with Stripe, HubSpot, Intercom, and more

The core skills you'll need:

- Experience in PHP and Laravel
- Experience with database solutions (SQL)
- Experience using AWS services and APIs
- Experience with RESTful APIs (security, documentation, e2e testing (Postman))
- Leading by example and contributing effectively by developing well-designed, testable, tidy, and efficient code
- Modern development practice approach TDD / unit testing using CI/CD
- Strong understanding of agile principles and practices

- Passion for technology and staying up-to-date with new trends and advancements in web development technologies, frameworks, and languages and implementing them as applicable
- Knowledge of GIT, code review best practices, and branching strategies and how they can be effectively managed within an engineering team

A few non-essential but nice-to-have skills:

- Dev-ops experience with AWS ECS, Docker, Bitbucket
- Front-end development in React
- Interest in machine learning

Requirements

- Outcome-focused with strong priority management skills
- Problem-solving skills with a strong desire to find the best possible solution — not the easiest
- Passionate about the latest tech and frameworks
- Cloud-based experience (AWS preferred)

About you

- You're a team player and a great communicator.
- You're strongly detail-oriented and a proactive problem-solver.
- You want to use your skills in a creative, caring, and empowering environment.
- You have a growth mindset, and you're ready and willing to learn on the job.
